Assignment 1 – Design a Digital Portfolio

Commented [AG1]: Assignment needs to be reproduced , you have not followed the instructions from the feedback !

Introduction

Pass

P1

1. For the Digital Portfolio, describe the purpose of creating this digital portfolio and how is it useful?

This portfolio is designed to showcase my technical and soft skills, professional experience, and achievements to potential employers. It includes projects with outcomes, highlighting my unique value proposition and career goals. Additionally, it features my educational background, certifications, and personal philosophy, all aimed at demonstrating why I am an ideal candidate for job opportunities. Clear contact information is provided to facilitate easy communication.

2. Explain who is the audience that will be viewing and using your portfolio.

Employers: Portfolios demonstrate your skills and experience to hiring managers, showcasing your capabilities through detailed descriptions of roles, achievements, and testimonials, making it easier for employers to envision your potential contributions to their team.

Clients and Customers: For freelancers and service providers, portfolios serve as evidence of expertise and quality work, featuring case studies and testimonials to attract clients by demonstrating your ability to meet their needs and achieve desired outcomes.

1. Alternative Design Solutions

The alternative website design presents a significant enhancement in user experience through its improved navigation structure, which allows for all pages to be immediately visible and accessible from the home page. Coupled with a cleaner and more appealing color scheme, the website not only becomes more aesthetically pleasing but also more practical for users to interact with. These thoughtful design choices streamline the process of finding information and create a more efficient and enjoyable browsing experience.

2. Detailed storyboard of layout and content page

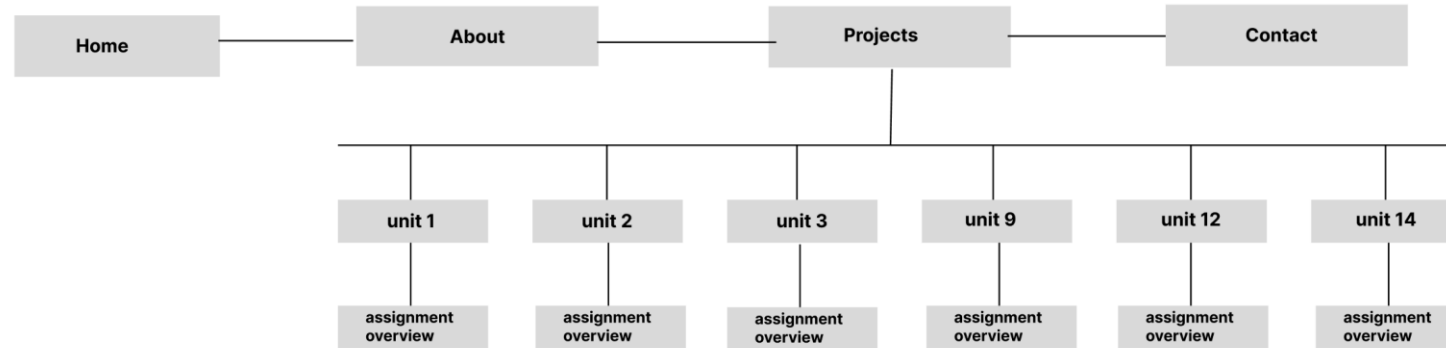

Commented [AG3]: UPDATE M1 ACHIEVED by acting on feedback and producing second design

Justify the choices made in your design solution explaining how the digital portfolio will:

1. Fulfil the stated purpose.

The purpose of the digital portfolio is to provide a user-friendly platform where users can easily access and manage their assignments. The alternative design fulfils this purpose by:

- **Enhancing Navigation:** By making all pages visible from the home page, users can quickly locate the content they need without unnecessary clicks or confusion.
- **Improving Aesthetics:** A cleaner and more appealing colour scheme creates a welcoming environment that encourages longer visits and interaction.
- **Streamlining Content Management:** The clear structure of each assignment page, with brief explanations and direct links for viewing and downloading, simplifies the process of managing assignments.

These design choices create an intuitive and efficient experience that aligns with the portfolio's goal of being a practical and accessible educational tool.

2. Meet the needs of the audience.

The portfolio's design is chosen for its user-friendly interface, which combines appealing visuals with functional simplicity. The design's intuitive navigation allows users to easily move between the project overview and individual assignments, ensuring they can quickly locate what they need. Each assignment page is streamlined to offer a summary, direct views, and downloads, catering to the audience's preference for efficiency and ease of use. This balance of aesthetics and usability justifies the portfolio's design as it aligns with the audience's expectations for a professional and accessible platform.
