Assignment 3 – Review a Digital Portfolio

Introduction

Pass

P6

Explain how the final portfolio is suitable for the intended audience and purpose.

Commented [AG1]: P6 Has been achieved by reviewing the portfolio for purpose and audience
M5 Has been achieved by reviewing the portfolio considering the feedback from users
D3 Has been achieved by a full evaluation of the initial design against the final design with full justification
OVERALL ASSIGNMENT GRADE IS DISTINCTION

Commented [AG2]: P6 Has been achieved by reviewing the portfolio for purpose and audience

1. Storyboards

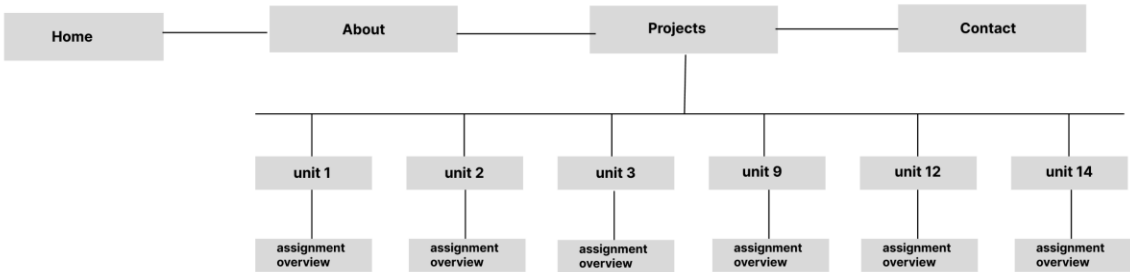

In choosing the alternative design for my website, I was drawn to its sleek and contemporary aesthetic. The layout is uncluttered, which contributes to a more refined user experience. Additionally, this design incorporates enhanced functionality, which improves site navigation and usability. The color scheme is particularly striking, providing a vibrant contrast that captures attention and makes the website stand out. Overall, this design choice reflects a commitment to modernity and efficiency, ensuring that visitors have a pleasant and engaging experience.

Name:

2. Structure chart.

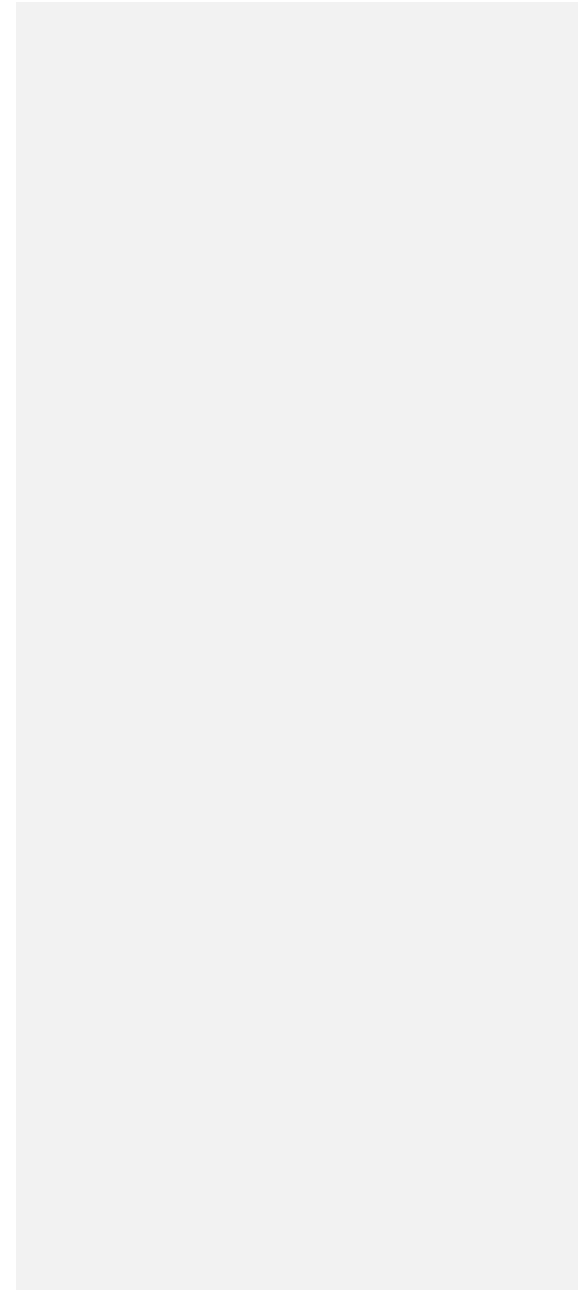

The structure chart serves as a roadmap for user navigation, ensuring that the final website is intuitive and user-friendly.

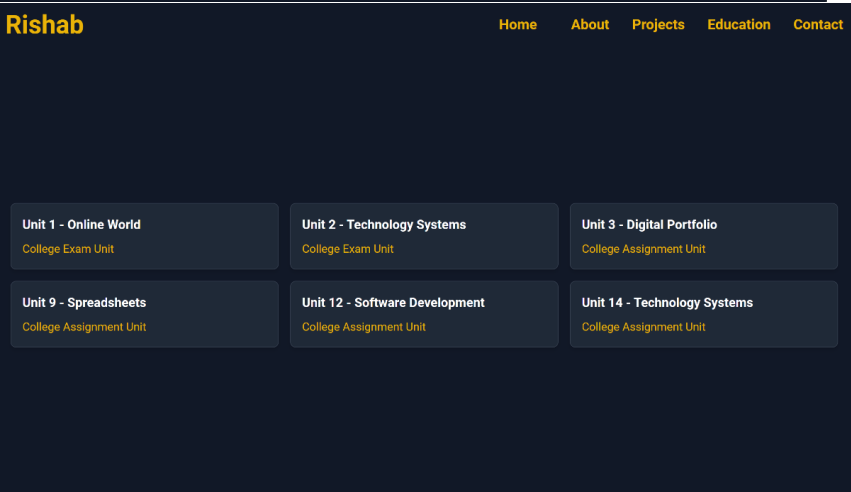

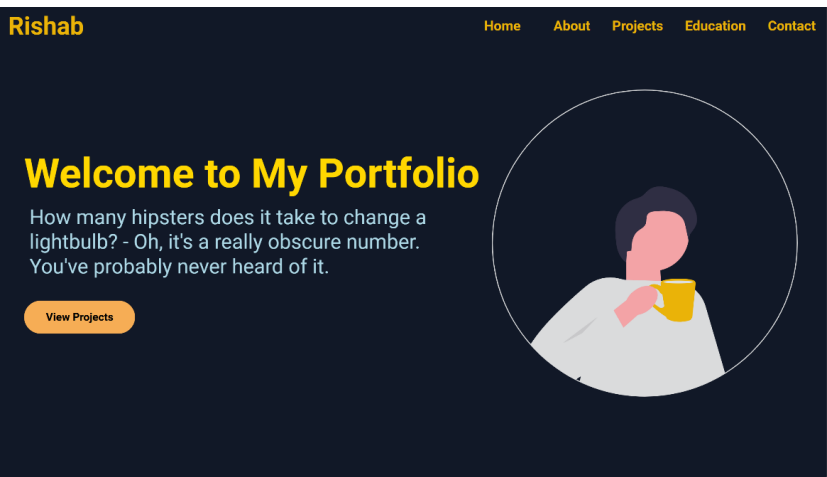

With this strategic layout, visitors can effortlessly explore the site, thanks to the clear and logical arrangement of information. This careful planning and execution guarantee a smooth browsing experience, eliminating any potential confusion and enhancing overall user satisfaction.

Name:

3. Screen shots and description of the webpages of the portfolio.

Distinction **D3**

1. Evaluate **Description** and screen shots of initial design (produced in assignment 1)

Upon evaluating the website's design, it's evident that the initial concept has been executed with a sharp and thoughtful layout. The content is appropriately aligned, and the placement of images enhances the overall aesthetic. The design choices reflect a keen understanding of user experience, ensuring that the site is both visually appealing and functionally intuitive.

Commented [AG4]: D3 Has been achieved by a full evaluation of the initial design against the final design with full justification

2. Description and screen shots of final portfolio (produced in assignment 2)

The website developed for assignment 2 exudes a contemporary vibe and is designed with user experience at the forefront. It features dynamic animations, engaging content, and a section for downloading assignments. Additionally, it

Technology Systems

Technology systems have evolved over the last century and as they were being built, more technology made things possible. We go through the hardware components needed to run a technology system (e.g. computer). We also get an understanding of how the data flows between the components and how data is processed. Then we discuss the types of software needed in an operating system such as the bios in a computer, or a disk defragmenter.

3. Justification of the changes made to your portfolio (differences between the initial design and the final design and why you have made those changes)

I've made some updates to my portfolio to make it easier to read and more fun to visit. Here's why I made these changes:

1. **Education Card:** I moved my education info to its own page and made it into a timeline. This helps keep the main page tidy and tells the story of my education journey in a simple way.
2. **Contact Form:** I added a form so people can easily get in touch with me, which is handy for job offers.
3. **Homepage Graphic:** I put a special graphic on the front page to show off my personality. It's a cool way to let people know who I am without just using words.
4. **Landing Page Jokes:** I added some jokes to the first page to show I have a good sense of humour. It makes the site more welcoming and shows I like to have fun at work.

These tweaks aren't just for looks; they make the site work better and help people get to know me.
