Name:

Assignment 4 – Reviewing a Spreadsheet

Introduction

Introducing the Football Season Ticket Management Spreadsheet, a comprehensive three-page document designed to streamline the organization and analysis of ticket holder details. The first page acts as a centralized database, capturing essential information such as ticket holder names, contact details, seat numbers, and payment statuses. The second page offers a succinct summary of critical data, featuring tables and charts highlighting total tickets sold, revenue generated, and payment status distribution. Finally, the third page focuses specifically on season ticket holders, providing insights into membership tiers, renewal statuses, attendance history, and exclusive events participation. Together, these pages form a powerful tool for efficiently managing and evaluating football season ticket information.

Pass

P6

For the final spreadsheet, explain how the final spreadsheet is suitable for the user requirements and purpose.

This spreadsheet meets user requirements as it contains things to automate tasks and save time.

Commented [AG1]: You have managed to provide a detailed analysis of the tools you have built in each worksheet. You also described how those tools enhance usability , efficiency and accuracy

Summary of Information

Usability: The Football spreadsheet excels in usability with its intuitive interface and user-friendly design. Clear labels, colour coding, and a logically structured layout make it easy for users of all levels to navigate. The spreadsheet's design facilitates efficient data input and retrieval, enhancing the overall user experience. Font size and type is easy to read, and headings are easy to make out as they are different colours to the data. The colour scheme that has been chosen is good as it really compliments the look and makes the spreadsheet easy to read. Navigation buttons help to navigate between pages within the spreadsheet. Hyperlinks have been used to navigate to another website, in this case the football team's website.

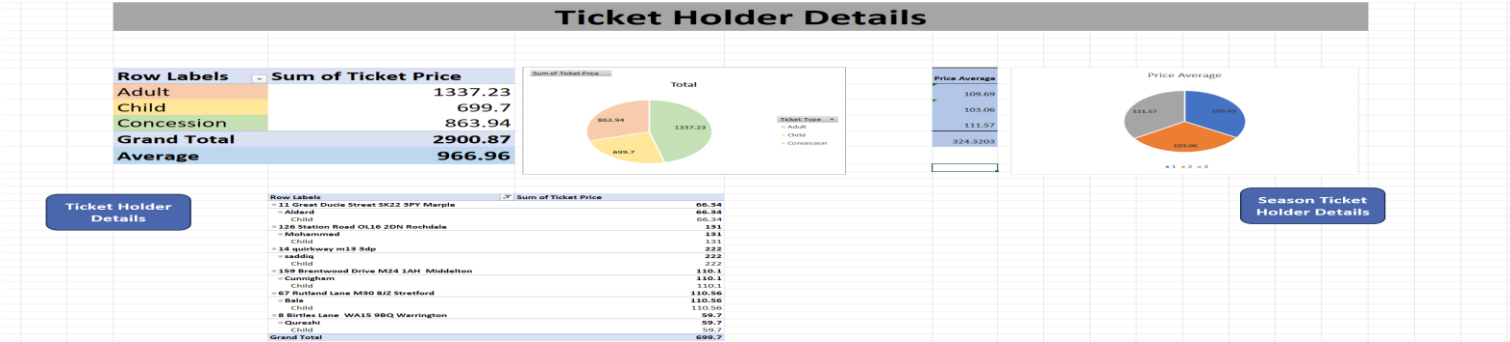

Efficiency: Efficiency is a standout feature of football spreadsheet pre-built formulas for statistical calculations automate tasks, minimizing manual effort and reducing the risk of errors. The spreadsheet's compatibility with external data sources streamlines data imports, ensuring up-to-date information without tedious manual input. This emphasis on efficiency allows users to focus on analysis rather than data management. Macros have been used to automate things being done, this case filters for concession and family tickets. Data entry forms have been used to ease the tensions of inputting data and

Name:

making this easier to use. Functions and formulas help automate things such as calculating a sum and, in this case, calculating a sum for the price paid for each ticket. Sorts and filters have been used here make things easier to see, sorting from A to Z to filtering by ticket type.

Accuracy: The spreadsheet prioritizes data accuracy through built-in validation rules and error-checking mechanisms. These features maintain data consistency and adhere to predefined standards. Real-time data feeds and regular updates from reputable sources further enhance the accuracy of the information presented. Users can rely on the [Football Spreadsheet Name] for precise and trustworthy football analytics. Data validations here avoids the need to check for mistakes as certain ticket types can be entered.

Spreadsheet 2 (Summary of information)

Usability: The spreadsheet stands out for its user-friendly design and intuitive interface, making it accessible to users of all levels. With clear labels, colour coding, and a logically organized layout, the spreadsheet ensures a seamless experience for data input and retrieval, enhancing overall usability. Font size and type here is easy to read and big.

Efficiency: A notable feature of spreadsheet is its efficiency. The inclusion of pre-built formulas for statistical calculations automates tasks, reducing manual effort and minimizing the risk of errors. The spreadsheet's compatibility with external data sources streamlines data imports, providing up-to-date information without the need for extensive manual input. This emphasis on efficiency enables users to focus more on analysis and less on data management. Functions and formula's have been used to

Accuracy: Precision is paramount in the spreadsheet, evident in its commitment to data accuracy. The built-in validation rules and error-checking mechanisms maintain data consistency and uphold predefined standards. Additionally, real-time data feeds and regular updates from reliable sources

Name:

further elevate the accuracy of the information presented. The page has pivot tables to make reviewing data really easier, Aswell as this , it uses sorts and filters to filter whatever you want

Summary Of Information

Main Menu

Usability: The spreadsheet distinguishes itself through a design that is both user-friendly and intuitive. The spreadsheet's clear labels, color-coded elements, and logically structured layout collectively contribute to a seamless experience, ensuring ease of use for individuals across different proficiency levels. The font size is comfortable and easy to see, and font type is consistent. Colours which are used are easy to see. Navigation is used to move between pages. Sorts and filters are used to filter through things in the table such as ticket types.

Name:

Efficiency: An evident strength of [Football Spreadsheet Name] lies in its efficiency. The incorporation of pre-established formulas for statistical computations automates processes, minimizing manual input and reducing the likelihood of errors. Furthermore, the spreadsheet's compatibility with external data sources expedites data imports, delivering up-to-date information without requiring extensive manual intervention. This emphasis on efficiency empowers users to concentrate on analysis rather than the intricacies of data management. Functions and formulas are used to determine if the ticket type is a child and add a restriction and to see if the form is successful or not, and to generate a randomly generated code.

Accuracy: Precision takes precedence in [Football Spreadsheet Name], underscored by its unwavering commitment to data accuracy. Through integrated validation rules and error-checking mechanisms, the spreadsheet maintains data consistency and upholds predefined standards. Real-time data feeds and regular updates from reliable sources contribute to the heightened accuracy of information presented, establishing [Football Spreadsheet Name] as a trustworthy resource for precise football analytics. Data validation is used on the ticket type to make sure that the ticket type is valid, and no errors are made.

Merit

M5

Review the extent to which the final spreadsheet meets the user requirements and purpose while considering feedback from others.

Commented [AG2]: M5 has been passed on condition that you explain how the changes you made based on the user feedback has improved the quality of your spreadsheet in terms of usability , efficiency and accuracy .

Is the spreadsheet easy to use?

This spreadsheet is designed to be user-friendly, and feedback from users confirms that it's easy to navigate and operate. Whether you're a beginner or an experienced user, the intuitive interface ensures a seamless experience. The key features and functions are easily accessible, making this spreadsheet suitable for a wide range of users with different levels of proficiency in spreadsheet applications.

Is the spreadsheet user friendly?

People really like using this spreadsheet because it's easy. No matter if you're new or experienced, the simple design makes it a breeze to navigate. Users find it straightforward to access and use the main features, making it a great choice for anyone, regardless of their spreadsheet skills.

Name:

Is the spreadsheet protected from errors?

Users have mentioned that the spreadsheet had a few initial issues, but they appreciated the responsive support and effective solutions. The feedback indicates a practical approach to problem-solving, contributing to an overall positive user experience.

Is data manipulation used?

The spreadsheet offers data manipulation capabilities, making it simple for users to handle and organize information. With user-friendly tools, individuals can easily modify, arrange, and analyse data within the platform. This feature simplifies tasks related to data management, providing a straightforward solution for users to manipulate information as needed.

OBSERVATION RECORD

Learner name:	Rish Siddiq		
Qualification:	T Level Foundation -Group 1		
Unit number & title:	Unit 9 Spreadsheet Development		
Description of activity undertaken			
Reviewing a spreadsheet created by the student as part of the assessment for Unit 9 Spreadsheet development. The Assignment tile is Assignment 3 Create a Spreadsheet			
Assessment criteria			
P4, P5, M3, M4, D3			
How the activity meets the requirements of the assessment criteria			
1) Colour theme consists of various shades of blue for the tables, navigation buttons. 2) Charts and graphs were formatted with different set of colours. 3) Navigation buttons and hyperlinks facilitate internal navigation among worksheets and external navigation with the website. 4) Efficiency is maintained by including tools like functions & formulae, named ranges and macros. 5) Accuracy is maintained by minimising the errors when tools like data entry forms and data validation. 6) Data analysis is facilitated with the use of tools like the sorts & filters, charts & graphs and pivot tables which enhances usability and efficiency at the same time. 7) A sophisticated spreadsheet with many tools and features that enhanced usability, efficiency, and accuracy. Well done			
Action Plan			
Action Plan 1) Add charts for the average and total price per ticket type. 2) Format the charts to change the colour, the title etc.

Name:

Commented [AG3]: You highlighted the user feedback from the different users .And followed the action plan and made the changes . But I do not see you describing how the changes you have made based on the user feedback has improved the quality of your spreadsheet .You need to describe how the changes you made based on the action plan has improved the quality of your spreadsheet (Usability, efficiency and accuracy)

Charts and graphs

Count of Ticket Type

Name:

How is the spreadsheet quality improved?

The spreadsheet quality has improved. Adding colours to the charts and graphs make them easier to identify certain things such as the average ticket sale for each person. Adding a title also improves the quality of the spreadsheet as it makes identification easier for the users to determine which chart is which, here 2 charts outline the total and average ticket price adding labels helps users to also recognise the type of ticket. Therefore, this spreadsheets usability improves, efficiency has also increased as the user can identify each of the charts and accuracy as increased because the user can identify the ticket types using the colours

Distinction (screenshots for sheets found in P6)

D4

Evaluate the final spreadsheet against the initial designs and justify any changes that were made, making recommendations for further improvements to the spreadsheet.

Worksheet and WSD diagram snippets can be found on the last page.

In evaluating the initial and final spreadsheet designs, the final design stands out significantly for its superior organization and user-friendly layout. Unlike the initial design, which was burdened by complexity and lacked tools for user-friendliness, the final design excels in meeting user-friendly requirements.

The use of straightforward formulas in the final design not only enhances accuracy but also contributes to its adaptability. In contrast, the initial spreadsheet's complexity raises concerns about potential errors and creates barriers to external understanding.

One notable improvement in the final design is the inclusion of user-friendly tools such as navigation buttons, addressing a key deficiency in the initial design. This addition enhances the overall user experience and accessibility.

Furthermore, the final design introduces four additional formulas, compared to the limited formula usage in the initial design. This increase in automation, including the use of sums and functions, significantly improves the efficiency of tasks within the spreadsheet.

The final design also introduces advanced features such as macros, charts, graphs, labels, and links, which play a pivotal role in enhancing functionality. For instance, the incorporation of macros allows users to filter specific data with a single click, while links enable seamless navigation to external websites for ticket purchases.

Name:

In summary, the final design not only addresses the shortcomings of the initial spreadsheet but also introduces a range of features that elevate its overall functionality and user experience. The strategic incorporation of user-friendly tools, additional formulas, and advanced features makes the final design a more robust and efficient solution for diverse spreadsheet tasks.

Commented [AG4]: D4 Evidence of full evaluation of the finished design with clear cross-reference against the initial design ,justifying the changes made

Recommendations

1. Choose a different colour scheme , make things clear and easy to see
2. Continue to add more functions and formulas , maybe for the ID and possibly a price list for each ticket (Adult : £50)
3. Add more macros , maybe into a separate page ? not too sure
4. Data validation for the seat codes (maybe 1 letter then 3 numbers? **W122**
5. **WSD INITIAL AND FINAL DESIGN**

(Final Design)

[illegible]

(INITIAL DESIGN)

Worksheet 1 - Ticket Holder Details		
column headings	Range and Values	comments
name	strings	
address		must be formatted correctly
phone number	integer	
ticket type	adult, child, concessionary	string + 3 ticket types only (Limited
requested seat	requested	3 number seat
allocated seat	random	3 number seat
price of ticket	list drop down with price, integer	must display ticket price
successful or not	Boolean value	
ticket code	unique number	ticket type + seat + number
expiry ticket	DD/MM/YYYY	needs to be according to what ticket they buy

Worksheet 2 - Summary Of Information		
column headings	Range and Values	comments
game title	string	string + dropdown
total of application	integer	must count the total amount of applications
ticket allocations	integer	show how many tickets are valid

Worksheet 3 - Season-ticket Type Details		
column headings	Range and Values	comments
ticket type	adult,child,concessionary	3 ticket types
price of ticket	currency, integer	dropdown
restrictions	string	
seats available per seating area	string + integer	set value

Worksheet structure - design	
Format choice	description
font	Calibri
borders	thin outside, thick outline
color and shading	green,orange,blue
column alligment	separate rows seperated
Date	DD/MM/YYYY
Currency	Pound £
Headers	Bold and centered
onscreen navigation	to be implemented
